

Kevin Portanova (REAC-IT, Project Manager) explained that the purpose of this meeting is to provide an open forum for pilot PHAs, vendors, and the REAC IT-Development team to exchange information about the progress of PIC-NG development. The call will take place monthly, usually on the last Wednesday of the month.

Guy Jenkins (REAC-IT, Dev. Team) announced that there have been some problems with the test environment this week. The certificate component is not working properly. The team anticipates that this issue will be solved in the next few days.

The following issues were also discussed:

API schema definitions for request for submission results vary from what is returned.

- Additional components are returned
- REAC Development team will examine and update documentation
- All documentation is subject to change

There are inconsistencies in the date format used.

- Form states MMDDYY but JSON specification is timestamped to the millisecond
- Software captures timestamp from when something is entered, but for manually entered dates (ex DOB- no time stamp)
- Some certifications effective at the beginning of day others at the end of day so there needs to be clarification if we are going to include time stamp
- IT will bring up to business and will post solution to slack
- Another example is that some formats in TRG are different than those with the API

Should fields be left padded?

- General consensus: handle as integer rather than left padded 0s

Former business rules from PIC may not make it into PICNG

- Asynchronous processing will continue, in part, to deal with load issues
- Synchronous validation will use pared down set of business rules in order to run more quickly. The REAC Development team has created a demo and will share the API, however, the applied rules are likely to change.
- Dev. Team will supply URL, with caveat that it will likely change before productions

Action Items:

Who	What	When
REAC Dev. Team	Post URL with business rules currently applied to synchronous validation	ASAP
Bailey	Post hashtag to be used for business questions	ASAP
Pilot agencies	Post feedback about what should be validated synchronously	Ongoing
REAC Dev. team	Update API for submission return	
REAC Dev. Team	Explore date and time stamping options
